Summary

Software Engineering undergraduate building distributed backend systems and microservices, with production experience as a full-stack intern shipping backend features and optimizing API performance. Designed a 4-service microservices architecture end-to-end using Java and Spring Boot, with additional full-stack experience in Node.js and hands-on work in Kafka, Redis, Docker, and Kubernetes. Focused on system design, observability, and writing code that holds up in unfamiliar codebases.

Experience

Meyvex Media Private Ltd. August 2026 – Present
Full-Stack Developer *On-site*

- Built and delivered 3 client websites end-to-end as a full-stack developer, coordinating directly with clients to translate their requirements into production-ready builds.
- Independently designed and built Meyvex Media's own company website from the ground up.

TheAyurherb July 2025 – October 2025
Full-Stack Intern *Remote*

- Reduced API response time by 15% on the search endpoint by profiling query execution and optimizing backend logic in a production Node.js/Express service.
- Cut post-release defect reports by manually testing API endpoints and UI flows against edge cases before every deployment.
- Partnered with backend and frontend engineers to scope, troubleshoot, and ship shared features on time, strengthening cross-team delivery.

Projects

Sphere | *Professional Networking Platform (Microservices)* | GitHub

- Designed and built a 4-service distributed system in Java and Spring Boot, using Spring Cloud OpenFeign for inter-service REST communication to enable independent deployment and fault isolation.
- Reduced API response times by approximately 50–70% (Postman-based pre/post latency benchmarking) via Redis-based write bucketing for like events, and decoupled notification delivery with an asynchronous Kafka pipeline.
- Integrated the ELK Stack and Zipkin for centralized logging and distributed tracing, and containerized/orchestrated all services with Docker and Kubernetes for repeatable deployments.
- Enhanced service resilience via Spring Cloud Gateway, Eureka Discovery Server, centralized configuration management, Resilience4j circuit-breaking, and rate limiting against traffic spikes.

Click N Go | *Local Services Booking Platform* | GitHub | Live Demo

- Built a full-stack booking platform using React, Node.js, and Express, implementing the complete search-to-confirmation booking flow end-to-end.
- Designed and implemented REST APIs for booking workflows, user authentication, and a reusable service-category architecture supporting multiple local service types.

Staylio | *Property Booking Backend* | GitHub

- Developed a scalable Java Spring Boot backend with PostgreSQL, powering end-to-end property booking and reservation flows.
- Implemented JWT-based authentication and role-based authorization to secure host vs. guest API access.
- Integrated Stripe's Payment Gateway API to handle payment confirmation and webhook processing for booking checkout.
- Containerized the application with Docker for reproducible builds across environments.

Education

Devi Ahilya Vishwavidyalaya Expected 2027
B.Tech, Artificial Intelligence and Data Science (CGPA: 8.42) *Indore, India*

Maharishi Vidya Mandir 2023
Higher Secondary Examination (84.6%) *Chhatarpur, India*

Skills

Languages: Java, JavaScript, TypeScript, Python
Frameworks: Spring Boot, Spring Security, React.js, Node.js, Express.js, Tailwind CSS, JUnit 5, Mockito
Systems & Integration: Microservices, System Design, Spring Cloud, OpenFeign, REST APIs, Apache Kafka, ELK Stack, Zipkin, Micrometer, Rate Limiting
Databases: SQL, PostgreSQL, MongoDB, MySQL, Redis, Neo4j
DevOps & Tools: Docker, Kubernetes, GitHub Actions (CI/CD), Git & GitHub
Core CS: Data Structures & Algorithms, OOP, Computer Networks, Operating Systems, DBMS

Achievements & Certifications

- **Flipkart GRiD 8.0 – Semifinalist, Software Development Track:** Cleared profile screening and a proctored DSA coding assessment to place among the top ∼1,500 of 165,730+ national registrants (top ∼1%).
- **Spring Boot Developer Cohort 3.0** – Coding Shuttle.
- **Google Developers Group (GDG) on Campus – Web Development Lead:** Led development of the GDG website (improved performance/usability) and conducted a technical session for 60+ participants.
